## NAME

**zpool-destroy** - destroy ZFS storage pool

## SYNOPSIS

**zpool destroy** [**-f**] *pool*

## DESCRIPTION

Destroys the given pool, freeing up any devices for other use.  This command tries to unmount any active datasets before destroying the pool.

**-f**　　　　Forcefully unmount all active datasets.

## EXAMPLES

**Example 1:** Destroying a ZFS Storage Pool

The following command destroys the pool *tank* and any datasets contained within:

　　　# **zpool destroy -f** *tank*
